Adobe Illustrator : Files should be saved as Illustrator EPS files and in the native Illustrator 11.0 or earlier format.

In cases in which two different colours are touching (close registration) a 0.5 to 1.0 point trap must exist between the two colours. You must convert all fonts to outlines (lines and curves). For all other software, please send files as an encapsulated postscript (.eps) file. Such files are generally acceptable, as long as the file has been exported as an .eps file and not merely renamed as such.

Please supply multicolour files as PMS SPOT colour separations and indicate exact PMS colour numbers. 4 Colour Process files requiring separation are not considered camera ready, and cannot be used for Screenprinting methods.

DECORATING

Spot Colour printing for Drinkware
 Minimum two colour imprint
 Set up charges are \$60.00 (G) per colour/design
 Repeat set up charge: \$30.00 (G) each
 Utilize imprinted price and add the following run charges:
 \$2.15 (E) for up to 3 spot colours
 Each additional spot colour after the 3rd spot colour \$0.40(E) each
 If you require an Aqua Mark in a 2nd location, an additional location running charge (based on quantity-see product page on website and click on 'view decorating information') AND applicable Aqua Mark running charges will apply.

Similar to traditional transfer printing, Aqua Mark has been developed exclusively for use on drinkware. Ink is applied to a sheet of transfer paper instead of directly onto the material. The transfer is then applied directly onto the product. This method allows for spot colour separations (PMS colour match). A clear overlay is always required. A white underlay may be required on dark product colours or glass. Production time for full order is 15-18 business days. A preproduction sample may be required for approval prior to full production. Longer lead times required for larger quantities.

Four colour process decorating for Drinkware
 Set up charge \$90.00 (G)

A preproduction sample is required for approval prior to full production which can be done within 3 business days of artwork approval. Production time for full order is 15-18 business days after preproduction sample approval. Longer lead times required for larger quantities. A clear overlay is always required. DIE CHARGES

Visit applicable product on website, click on 'view decorating information' button, enter your logo size to calculate your die charge.

Note: Dies are stored in house for a period of two years.

After two years a new die must be made and a new die charge will apply.

The process of debossing is offered on most of our leather, koskin, textura, EVA, and simulated leather lines only. A die is created of your logo and then pressed into the material creating an 'impression' of the logo. Debossing provides a subtle, yet higher perceived value on many products. Set up charge is included. Die charge is extra. Set up is also no charge on exact repeat orders assuming previous purchase order or invoice number is provided.

Set up charge \$60.00(G) each
 Repeat set up charge: \$30.00(G) each
 All products up to 5,000 stitches utilize no imprint price and add:

The screen printing process ensures your imprint looks its best on a wide variety of fabrics. This is the most common method of decoration.

TRANSFER PRINT

A transfer is created in a very similar method to screen printing, however, the ink is applied to a sheet of transfer paper instead of directly onto the material. The transfer is then pressed onto the product using a combination of heat and pressure. This method allows for unlimited colour separations that always require an underlay. Many products utilize this process as it assists in decorating products with foam insulation or hard to screen print locations.
